PROJECTS OKPizza | React, Rails, JavaScript, Flux | [Live Github](#)

OKCupid-inspired single page web app

- Created Rails associations to filter questions and eliminate N+1 queries, increasing database efficiency
- Leveraged Flux architecture for unidirectional data flow to allow profile view changes in real time
- Used GIMP to design unique photos, resulting in artistic user profile seeds

BBCGrid | CSS | [Live Github](#)

- Aesthetically recreated the BBC.com website with a touch of humor using CSS Grid

power-effects package | CoffeeScript | [Github](#)

- Made an addon for Atom's activate-power-mode, resulting in a colorful, vibrant ember-like sparks effect

PuzzleAcademy | JavaScript, HTML5 Canvas, KineticJS | [Live Github](#)

Time-based, orb matching puzzle game built on Canvas with KineticJS

- Wrote orb check algorithm to ensure only 3+ same color matches erase
- Utilized KineticJS for canvas rendering and movement resulting in a smoother UI

TECH EXP Vialfly | New York | Software Engineer Intern | Fall 2017 - Present

- Designed a component flowchart to improve team workflow
- Updated and enhanced CSS to match Zeplin design specifications
- Created React components and modals to expand site features

ERP Maestro | New York | Developer Intern | Summer 2016

- Identified blocker bugs through black-box testing to increase app performance
- Documented software bugs and filed them in Microsoft Test Manager
- Authored software updates and company news for online blog

EDU App Academy NYC | Full Stack Web Development | Fall 2016

- Focus on pair programming, Object Oriented Programming, and algorithms

Cal State University Northridge | Art - Animation | Summer 2010

- Focus on art, illustration, animation, and design
