Evelyn Lee | *Web Developer*

(646) 589-1910 • evelynlee34@gmail.com • NY, NY

PROJECTS

OKPizza | *React, Rails, JavaScript, Flux* | **Live Github**
OKCupid-inspired single page web app
- Created custom Rails association to filter questions and eliminate N+1 queries to increase database efficiency
- Leveraged Flux architecture for unidirectional data flow allowing users to view profile changes in real time
- Used GIMP to design unique photos, resulting in one of a kind user profile seeds

CustomPAD | *JavaScript, MERN Stack* | **Github**
- Applies the MERN Stack (Mongo DB, Express.js, React, Node.js) to design a unique, visually appealing spreadsheet for tracking custom-made game characters

Weatherly | *JavaScript, React, Redux* | **Github (Windows) Github (Mac)**
- Employed Redux after quickly learning the library in a day to design a smooth weather app
- Implemented multiple APIs from Google Places to React Toolbox to enhance everything from autocomplete to weather icon design

PuzzleAcademy | *JavaScript, HTML5 Canvas, KineticJS* | **Live Github**
Time-based, orb matching puzzle game built on Canvas with KineticJS
- Wrote orb check algorithm to ensure only 3+ same color matches erase
- Utilized KineticJS for canvas rendering and movement resulting in a smoother UI

NAMEStack | *MEAN stack, MongoLab, Heroku* | **Live Github**
Simple stat-displaying app built using the MEAN stack
- Learned MongoDB, Express, Angular 1.x, and Node.js for personal experience, creating an entry editing app

TECH EXP

ERP Maestro | *New York* | *Developer Intern* | *Summer 2016*
- Identified blocker bugs through black-box testing to increase app performance
- Documented software bugs and filed them in Microsoft Test Manager
- Authored software updates and company news for online blog

TECH EDU

App Academy NYC | *Full Stack Web Development* | *Fall 2016*
- Focus on pair programming, Object Oriented Programing, and algorithms

SKILLS

Python Rails JavaScript React SQL HTML5/CSS RSpec MEAN Stack
